SIM-2026-027: Finite-T holographic transport via Thermofield Double (L=8) -- verdict: SUPPORTED_AMPLITUDE
(a) Transport amplitude vs temperature
Spearman(β, A)=1.00, degradation=95%
normalized transport response A(β)
N_eff
inverse temperature β
integrated A(β) (norm.)
peak A(β) (norm.)
N_eff (thermal mixing)
cold (AdS)
hot
(horizon absorbs)
(b) Transport time (secondary)
time-curve: TRACKS_WANG_HE
transport time T(β)
inverse temperature β
Γ(β) vs BTZ-QNM
Γ meas.
2π/β
T(β) (transport time)
β→∞ anchor T=1.30
