(a) same data, three standard estimators
dr = 2 carries 95.8%
of the published fit
published: $\alpha = 3.92$
log-space OLS: $\alpha = 2.89$
rel.-error wt: $\alpha = 2.82$
$|F(\Delta r)|$
separation Δr (sites)
(b) a power law is flat here
claimed $\alpha = 2\Delta_T = 4$
measured plateau 2.59
6 consecutive slopes, ±7.5%
scalar exchange $\alpha = 2$
local slope $-d\ln|F|/d\ln\Delta r$
separation Δr (sites)
